CHANGEMAKERS FOR A JUST AND SUSTAINABLE FUTURE

Climate crisis. Global pandemic. Anti-Black racism. The new Faculty of Environmental and Urban Change at York University is a call to action to respond to today’s most pressing challenges facing people and the planet. Discover career paths that will make a better world.

Our programs will prepare you with the fundamental knowledge, critical thinking skills, hands-on experience, and global perspectives necessary to achieve personal success and make positive change.

Environmental Arts & Justice (BES)
Choose a degree that centres on solutions for a just and equitable world. Address global environmental challenges through political, philosophical, artistic, cultural and educational theory and practice. Through creativity, collaboration, critical analysis, and hands-on community engagement, learn how we can envision and realize a sustainable future.

Career Paths:
- Artist & Designer
- Diversity & Equity Professional
- Environmental Lawyer

Environmental Science (BSc)
Learn how climate change, population growth, biophysical contaminants and extreme weather events are straining our ecosystems and our lives. Examine the alterations to Earth’s atmosphere, biosphere, water and landforms and gain scientific, technical and analytical skills to create real world solutions to these complex issues.

Career Paths:
- Government Biologist
- Pollution Control Specialist
- Natural Resource Conservationist

Global Geography (BA)
Study the complex relationship between humans and the physical world. Using analytical tools, learn how populations move and change, how production and consumption impact our economic future and how the expansion of cities has shifted political power dynamics and changed landscapes.

Career Paths:
- GIS Analyst
- Policy and Economic Developer
- Logistics Manager

Sustainable Environmental Management (BES)
Learn about our current global environmental challenges and how to build solutions for a better future. Using science, law, policy and economic approaches, discover how we can manage and conserve our natural resources through the study of energy transitions, environmental biology, political influence and regulations.

Career Paths:
- Sustainability Officer
- Energy Analyst
- Waste Management Specialist

Urban Studies (BA)
Learn about global urbanization, urban life and the relationship that cities have with other spaces and nature. Explore the ways in which political institutions, social relations, economic systems, the built environment, infrastructure, ecological processes and cultural understandings weave together into the urban fabric.

Career Paths:
- Urban Planner
- Community Developer
- Emergency Response Officer
